Project Name	Employee Raise Issue
Maximum Marks	2 Marks

Problem-Solution Fit:

The Problem-Solution Fit for the Employee Raise Issue project focuses on identifying the difficulties employees face while reporting workplace or IT-related issues and providing a simple, centralized solution through ServiceNow**.**

The proposed solution allows employees to raise issues through the Employee Center/Service Portal using a guided Record Producer. Employees can enter the required information, select an appropriate Category and dependent Subcategory, and submit their issue. The submitted information is stored centrally for administrators to manage and track.

Purpose:

- Solve employee reporting problems: Provide employees with a simple and structured way to report workplace or IT-related issues.
- Improve ease of use: Use a guided Record Producer with mandatory fields and dependent Category–Subcategory choices to make issue submission easier and more accurate.
- Increase solution adoption: Provide employees with an accessible Employee Center/Service Portal through which they can conveniently raise issues.
- Improve communication: Collect the required issue information in a structured format, helping support teams understand and respond to employee concerns more effectively.
- Reduce manual effort: Centralize submitted issues in ServiceNow instead of depending on scattered or manual reporting methods.
- Improve issue tracking: Store employee-raised issues in a centralized table so administrators can review and manage them efficiently.
- Understand employee needs: Analyze the types of issues frequently reported by employees and use this information to improve the support process.

- The solution therefore connects the **actual employee reporting problem** with a practical **ServiceNow solution**, making the issue-raising process simpler, more organized, and easier to manage.
